

Push Button Switch

Description:

LTV Series Push Button Switch Product Specifications

File/Edition: LTV-75NN5.7B-AN-SPC.001

Customer Name: Model No.: LTV-75NN5.7B-AN

Customer P/N: Toneluck P/N: LTV-75NN5.7B-AN

Representative: Project Code:

Push Button Switch

	Specifications Receipt Confirmation

Push Button Switch

LTV Series Push Button Switch Product Specifications

1. General Characteristics

1.1 Application: This specification is applied to the vertical push switch for general applications.

1.2 Operating Temperature Range : -10° C to $+60^{\circ}$ C 1.3 Operating Relative Humidity : $\leq 96\%$ RH $+40^{\circ}$ C

1.4 Test Conditions: Unless otherwise specified, the atmospheric conditions for making

measurements and tests are as follows :
Ambient Temperature : 5~35°C
Relative Humidity : 45~85%

Air Pressure: 86~106kPa (860~1060mbar)

2.Appearance, Structure & Dimensions

2.1 Appearance: The switch shall have good finishing, and no rust, crack or

plating defects.

2.2 Structure & Dimensions: Refer to individual product drawing.2.3 Markings: Refer to individual product drawing.

2.4 Statement: Switch Function: Refer to individual product drawing

Switch Timing: Refer to individual product drawing Plunger Color: Refer to individual product drawing

3.Ratings & Life

Ratings	Operating life with load
Refer to individual	product drawing

4. Electrical Characteristics

\times	Item	Criteria	Test Method	
4.1	Contact Resistance		Shall be measure at 1KHz \pm 200Hz(20mV Max, 50mA Max) or 1A, 5V DC by voltage drop method.	
4.2	Insulation Resistance	100M Ω Min.	500 ± 50 VDC voltage is applied between each pair of terminals and between the terminal and the metal frame for 60 ± 5 s.	
4.3	Dielectric Voltage	No dielectric breakdown shall occur.	500VAC (50~60Hz,cut-off current 2mA) is applied between non-connected terminals and between terminals and the metal frame for 60±5s.	

5.Mechanical Characteristics

	Item	Criteria	Test Method
5.1	Operating Force	IRATAL TO INGIVIALISI DIOGLICI ALSWINA	A static load shall be applied to the tip of actuator in operating direction.
5.2	Travels	Refer to individual product drawing	
5.3	Terminal Strength		A static load of 5N shall be applied to the tip of terminal in a desired direction for 1 min. The test shall be done once per terminal.

Customer P/N:	Toneluck P/N: LTV-75NN5.7B-AN	Project Code:

TONELUCK

Push Button Switch

LTV Series Push Button Switch Product Specifications

5.4	Strength of operating section	-Shall be free from pronounced wobble bending and mechanical abnormalities.	 -A static load of 10N shall be applied in the operating direction for 15s. -A static load of 5N shall be applied in the pulling direction for 15s. -A static load of 10N shall be applied in the perpendicular direction of operation at the tip of actuator for 15s.
5.5	Vibration Proof	After test, - Contact resistance: $200m\Omega$ Max Insulation Res.: $50M\Omega$ Min Electrical performance requirements specified in item 4.3 shall be satisfiedOperating force: Within $\pm 10\%$ of specified valueNo abnormalities shall be recognized in appearance and construction.	Switch shall be secured to a testing machine by a normal mounting device and method. Switch shall be measured after following test. (1) Vibration frequency range = 10~55 Hz (2) Total amplitude = 1.5mm (3) Sweep ratio: 10~55~10Hz Approx. 1 min. (4) Method of changing the sweep vibration frequency: logarithmic or linear (5) Direction of vibration: Three perpendicular directions including actuating direction. (6) Duration: 2 hours @ (6 hours in total)
5.6	Mechanical Shock	After test, - Contact resistance: $200m\Omega$ Max Insulation Res.: $50M\Omega$ Min Electrical performance requirements specified in item 4.3 shall be satisfied Operating force: Within $\pm 10\%$ of specified value Shall be free from mechanical abnormalities.	Switch shall be measured after following test: (1) Mounting Method: Normal (2) Acceleration: 490m/s² (50G) (3) Duration: 11 ms (4) Test Direction: 6 directions (5)Number of shocks: 3 times per direction (18 times in total)
5.7	Solderability	-Terminal More than 90% of immersed part shall be covered with solder.	Switch shall be checked after following test: (1) Soldering Temperature: $260\pm5^{\circ}$ C Immersing Time: 3 ± 0.5 s Flux immersing time shall be 5~10s in normal room temperature. (2) Immersion Depth: Immersion depth shall be at copper plating portion of PCB after mounting. (Thickness of PCB = 1.6mm)
5.8	Solder Heat Resistance	-No abnormalities shall be observed in appearance and operationThe electrical performance requirements specified in item 4 shall be satisfied.	Switch shall be measured after following test: (1) Soldering Temperature & Immersing Time Dip Soldering 260±5°C 5±1s Manual Soldering 350±5°C 2~3s (2) Immersion Depth:(For Dip Soldering) Immersion depth shall be at copper plating portion of PCB after mounting. (Thickness of PCB = 1.6mm.)

Push Button Switch

LTV Series Push Button Switch Product Specifications

6.Durability Characteristics

	Item	Criteria	Test Method
6.1	Operating Life with Load	After test, - Contact resistance: 500mΩ Max Insulation Res.: 10MΩ Min Electrical performance requirements specified in item 4.3 shall be satisfied Operating force shall be within +10%,-30% of specified value The switch shall be free from abnormalities in appearance & construction.	20,000 cycles of operation shall be performed continuously at a rate of 15~30 cycles per minute with load as follow: 1A 13VDC (Resistive Load) Or 100,000 cycles of operation shall be performed continuously at a rate of 15~30 cycles per minute with load as follow: 0.1A 30VDC (Resistive Load)

7.Weather Proof Characteristics

	Item	Criteria	Test Method
7.1	Cold Proof	After test, - Contact resistance: $300m\Omega$ Max Insulation Res.: $10M\Omega$ Min Electrical performance requirements specified in item 4.3 shall be satisfied Operating force shall be within ±10% of specified value The switch shall be free from abnormalities in appearance & construction.	After testing at $-25\pm3^{\circ}$ C for 96 hours, the switch shall be allowed to stand under normal temperature and humidity conditions for 1 hour, and measurement shall be made within 1 hour after that. Water drops shall be eliminated.
7.2	Hot Proof		After testing at 70±2°C for 96 hours, the switch shall be allowed to stand under normal temperature and humidity conditions for 1 hour, and measurement shall be made within 1 hour after that.
7.3	Moisture Resistance		After testing at 40±2°C, 90~95% RH for 96 hours, the switch shall be allowed to stand under normal temperature and humidity conditions for 1 hour, and measurement shall be made within 1 hour after that. Water drops shall be eliminated.
7.4	Temperature Cycling		After 5 cycles of following conditions, the switch shall be allowed to stand under normal temperature and humidity conditions for 1 hour, and measurement shall be made within 1 hour after that. Water drops shall be eliminated. 70±2°C Room Temp 30min 1 cycle
